

# TPA 3: Face Verification from LFW / Youtube face, in presence of occlusion and pose

January 20, 2016

**Problem Statement:** Given two face images find out whether the two faces are similar or different.

**Input:**

- Two face image samples will be given of the same/different subject.

**Expected Output:**

- Identify whether they are from the same subject or different.

**Hint for excellence:** *Special Credit will be given if the designed system could able to handle both occlusion and pose simultaneously.*

**Additional Material:** Dataset will be provided
