

Joint Image Deblurring and Super-Resolution

Computer Vision (CS6350)
TPA-8

1. Problem Statement

The problem introduces the super-resolution task with the presence of motion blur.
Given a natural image with severe blur, the task is to generate a clear high-resolution Image.

2. Input

A blurred image

3. Expected Output

- Clear High-resolution Image.
- Quantitative Evaluation metric PSNR and SSIM.
- Demo to run on a given image.

Input: Blurry, Low-resolution Image

Output: High-Resolution Image

4. Dataset

- [GOPRO](#) [5]: The dataset contains 2103 blurry and sharp HR image pairs.
