

## **TPA 4: Automatic Video Shot Classification using Visual Features**

**Problem Statement:** This project is aiming at classifying video shots into different groups based on its visual content. The classification (or grouping) has to be done automatically using visual features only.

### **Input:**

- A collection of video shots belonging to different categories e.g. cartoon, news videos, sports videos etc (moving and static camera video shots).

### **Expected Output:**

- Automatically group the video shots into different categories
- Given a query video shot determine the class label of that shot

**Hint for excellence:** *Special Credit will be given if the designed system could able to handle videos with multiple objects.*
