Module 2.7: Linearly Separable Boolean Functions

- So what do we do about functions which are not linearly separable ?

- So what do we do about functions which are not linearly separable ?
- Let us see one such simple boolean function first ?

- Most real world data is not linearly separable and will always contain some outliers
- In fact, sometimes there may not be any outliers but still the data may not be linearly separable
- We need computational units (models) which can deal with such data
- While a single perceptron cannot deal with such data, we will show that a network of perceptrons can indeed deal with such data

- Before seeing how a network of perceptrons can deal with linearly inseparable data, we will discuss boolean functions in some more detail ...
