

CS 7016: TOPICS IN DEEP LEARNING

CONVOLUTIONAL NEURAL NETWORKS FOR CHARACTER EMBEDDINGS

Input: "I really love this show!!"

Split it into characters and turn it into a list

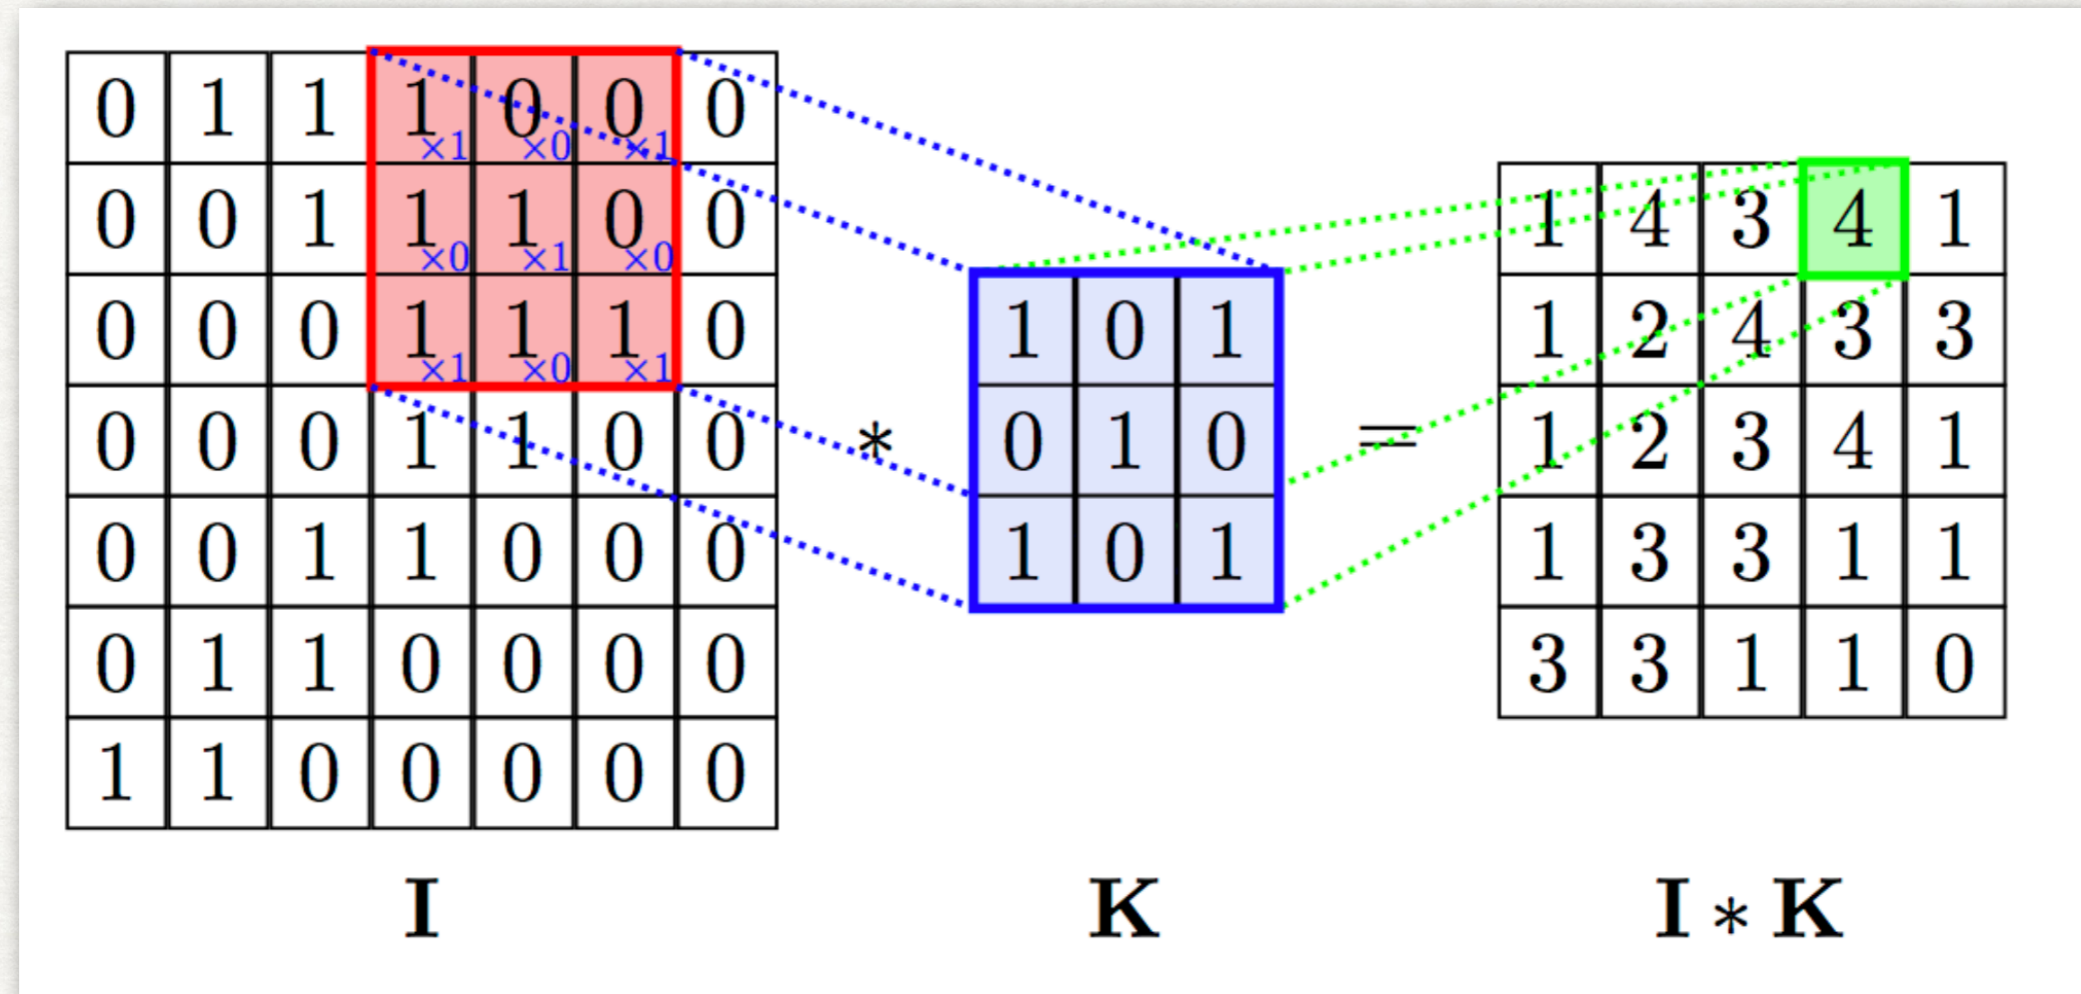

Max Length: 140 characters

Vocabulary = 70(characters + digits + special characters)

2D CONVOLUTIONS NOT SUITED FOR TEXT!

Input: "I really love this show!!"

Split it into characters and turn it into a list

1	0	0	0	0	0	0		0	0	0	0	0	0	0

Input Channel = Alphabet size = 70

Batch: 1 "image"
Input Channel = 70
Output Channel = 1
Output Shape = (1,1,138)

200 1-D Kernels

Batch: 1 "image"
Input Channel = 70
Output Channel = 200
Output Shape = (1,200,138)

140

Max pooling operation will result in a 200 dimensional embedding for each "image"

Note that this kernel covers tri-gram, there could be other which can cover bi-gram, five-grams etc.
