

### **Problem Set: Streams**

1. Implement cat, cp, grep.
2. Given output of ps command in a file, read the input and find the total time taken by all the processes.
3. Read an arbitrary C program and write to the same C file with newline inserted after every semicolon.
4. Modify the above program to not print newline if the semicolon is part of a for loop or string or comment.
5. Read an HTML program and remove all the tags <...>.
