## CS6843: Program Analysis

Instructor: Rupesh Nasre (rupesh@cse)

TAs: Aadhirai, Abhishek, Raghesh

Web: ~rupesh/teaching/pa/jan17/

Moodle: courses.iitm.ac.in/course/view.php?id=4624

## What is Program Analysis?

For an end-goal identify "interesting aspects" of a program's representation.

## What is Program Analysis?

For an end-goal identify "interesting aspects" of a program's representation.

Checking security

Array index range

Source, AST, binary, executed instruction

# Examples

End goal	Interesting aspect	
Dead code elimination	Reachability	
Constant propagation	use-def	
Security	Array index range, dangling pointers	
Parallelization	Data dependence, SIMD opportunities	
Debugging	Slice	
Cache performance	Memory access pattern	
Memory reduction	Live ranges	

Program Analysis is often a pre-cursor to Optimization.

**7** 

(1)

0

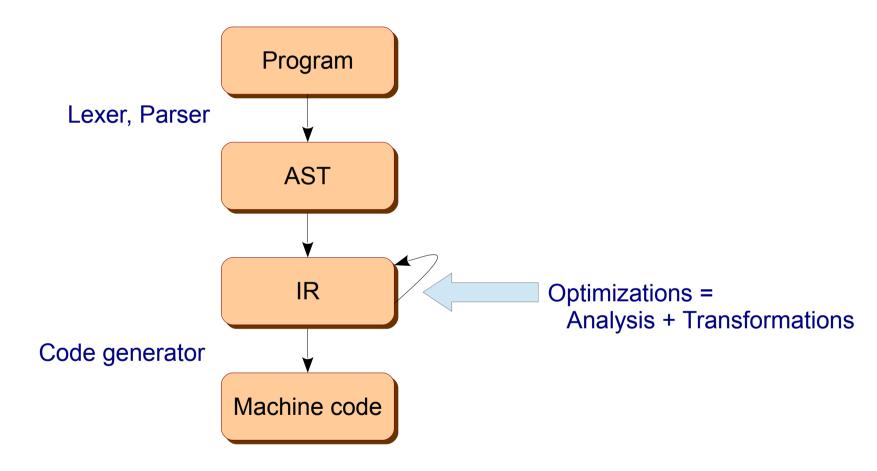

ш

**Machine-Independent Code Optimizer** Intermediate representation **Code Generator** Target machine code **Machine-Dependent Code Optimizer** Target machine code

But remember that Analysis can be done on source, AST or machine code also.

Symbol Table

## **Compiler Organization**

## **Example Three**

```
void main() {
  int a, b, c, d, *p;

  p = &a;
  c = a + b;
  d = *p + b;
}
```

Can this computation be avoided? (common subexpression elimination)

```
void main() {
  int a, b, c, d, *p;

  p = &a;
  int t = a + b;
  c = t;
  d = t;
}
```

This requires a program analysis called *pointer analysis*.

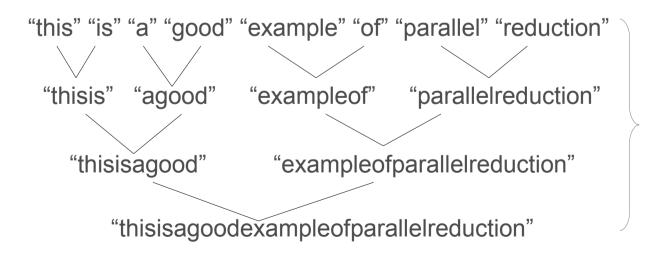

This requires another analysis called *type analysis*.

## **Example Two**

```
*sresult = 0;

for (ii = 0; ii < nn; ++ii) {
    strcat(sresult, str[ii]);
}

Can you parallelize this code?
```

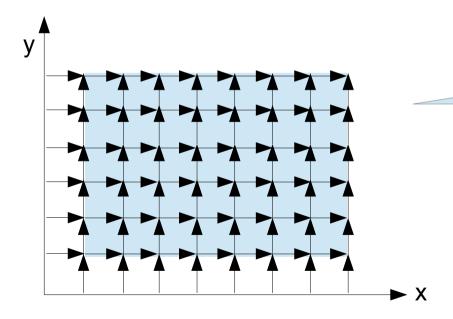

Requires semantic analysis to figure out that strcat performs an associative operation.

### **Example One**

for (x = 1; x < M; ++x)for (y = 1; y < N; ++y)a[x, y] = a[x - 1, y] + a[x, y - 1];

Can you parallelize iterations?

Requires loop dependence analysis

#### In This Course

- 7. Dynamic Analysis (DYN)
- 6. Shape Analysis (SHA)
- 5. Program Slicing (SLI)
- 4. Parallelization (PAR)
- 3. Security Analysis (SEC)
- 2. Pointer Analysis (PTR)
- 1. Data Flow Analysis (DFA)

## Logistics

- Moodle for submissions, announcements, discussions
  - Your responsibility to subscribe to it.
- Evaluation:
  - assignments (40%)
  - midsem (25%)
  - endsem (25%)
  - scribing (10%)
- C slot (Mon 10, Tue 9, Wed 8, Fri 12).
- Room CS 24.

## Assignments

Four programming assignments (40%).

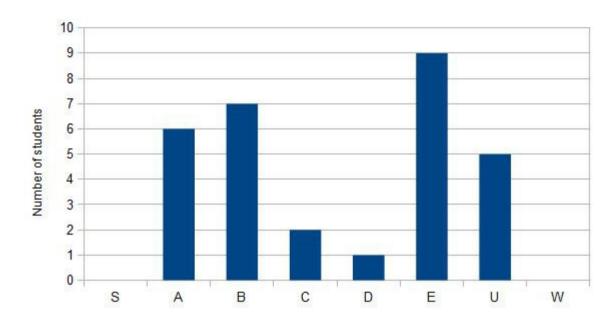

$$-5+10+12+13$$

- Assignments would be in LLVM.
- You should work individually.
- You have this week to suggest me any date changes for A2, A3, A4.

### Scribing

- Lecture notes, technical writing
- 10% of your efforts in the course
- The notes would be useful for everyone.
  - You will own the compliments and the brickbats.
- Scribes should contain:
  - A textbook like description of the lecture
  - Questions and discussions in the class
  - Anything else that may improve the understanding

# Grading

2016 PA evaluation

I don't hesitate to give W grade too.

### Course Schedule

Month	Lectures	Evaluations
JAN	DFA, PTA	A1
FEB	PAR	A2
MAR	SEC, DYN	A3, MIDSEM
APR	SHA, SLI	A4, ENDSEM

MidSem and EndSem will have mutually exclusive topics.
